

# EXPLORER 540 M2M and PRISM

Extend your network with reliable and secure communications

# COBHAM

April 2021

EXPLORER 540 is a hybrid M2M device designed for both LTE and satellite connectivity. A data terminal with automatic failover between carriers and unmatched service availability for bespoke real-time IP connectivity and M2M solutions.

## Main features

- Small form factor with an 8"x8"x2" footprint
- Automatic failover between satellite and LTE
- Integrated all-in-one M2M device
- Single cable install with PoE
- Robust IP66 and C1D2 design

## PRISM M2M is about

...intelligent routing and seamless switching between networks

...one addressable IP address for the remote asset across carriers and networks

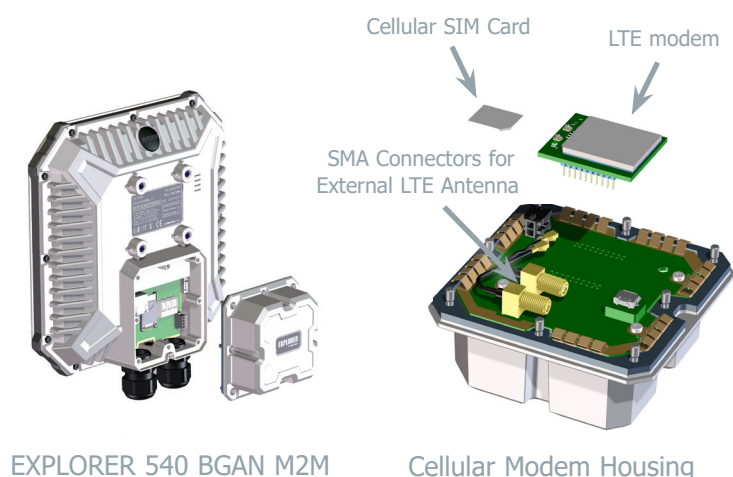

...125 addressable assets behind each BGAN

## Inmarsat BGAN M2M offers

...global internet connection via Inmarsat's L-Band satellite network

...high-speed M2M connectivity with 464 Kbps real-time IP

...global coverage and 99.9% availability
